The Butterfly Effect

I want you to think to yourself: **the tiniest thing you do now could determine your future!**

What is the butterfly effect?

Definition - a small event causing a much larger outcome. For example, something as small as a flutter from a butterfly could cause a typhoon.

A famous real-life example is how one wrong turn started World War 1!

Archduke Franz Ferdinand visits Sarajevo, Bosnia. The Serbian assassin failed to assassinate the Archduke as the driver spotted the danger. The officials wanted to take the Archduke on a tour of the city, but the Archduke insisted to visit the wounded victim from the bomb attack

The driver did not know the route as he did not have a map and he took the wrong turning. However, coincidentally an assassin who attempted to kill the Archduke happened to be on the street having a drink and he saw the opportunity and killed the Archduke causing Austria-Hungary and Germany to declare war on Serbia, Russia, France and Great Britain creating World War I.

If the driver took the right turn, our lives today would be completely different as World War I might have been triggered by something else or started a bit later or even might have not ever started.

Other examples are a boat sinking made George W Bush president or Hitler being the reason why Anime exists.

So, I want you to think to yourself again, the tiniest thing you do now could determine your future so think about the decisions you make. Do everything you can to be sure that they are beneficial to your future.
